

BACK TO THE FUTURE

RE-INTRODUCING LONG RADIUS BENDS

THAT'S RIGHT, WE ARE BRINGING BACK LONG RADIUS BENDS WHICH ARE IDEAL FOR STACKWORK, PLUMBING & DRAINAGE AND LOW FLOW INSTALLATIONS.

- Fully compliant with the prescribed radius in AS/NZ 3500.2 when installed at the base of stacks.
- Reduces hydraulic jump.
- Assist in eliminating blockages due to reduced flows.
- Can be installed in stack systems above ground in multi-storey buildings.
- Ideal for use in areas with reactive soils.
- Can also be used as a roll-over to connect a branch drain off the main drain.
